

# The Three Gorges Project

The Three Gorges mentioned here are the Qutang Gorge, Wuxia Gorge and Xiling Gorge, which lie along the ChangJiang (Yangtze River). The Three Gorges Project is one of the largest hydropower-complex projects in the world. This project brings pros and cons in the environmental, social and economic aspects.

The dams of TGP are 180 metre in height

Many people have to leave their homelands and move to uphill areas.

**10.1.1 Please mark the area, where the Three Gorges Project is covered.**

**10.1.2 Some cultural relics will be submerged when the Three Gorges Project is completed. Please give three examples of these cultural relics, and write down the details of corresponding mitigation measures implemented by the Chinese Government.**
